Fugitive Arrest Training

*The Michigan Incident Crime Reporting (MICR) Unit collects statistical crime data from all Michigan law enforcement agencies. This data is published annually in the FBI's Crime in the U.S. and the Michigan Crime Annual. Michigan State Police (MSP) statistical crime data is sent to MICR through the **Automated Incident Capture System (AICS)**.*

The purpose of this training bulletin is to clarify how fugitive arrests should be handled, whether the original complaint was pursued by MSP or by another agency (local or county sheriff).

1. When a warrant arrest is made by MSP on an original MSP complaint out of their own Post/ORI:

- MSP enters the arrested data into AICS
- The arrest charge should be for the original charge into AICS

For example, Suspect 1 committed a B&E on January 1, 2013, and Complaint 725 is opened for this crime. At the beginning of the investigation, the suspect is unknown. Further investigation reveals the identity of the suspect and a warrant is issued. Investigation also reveals that the suspect has left the area because of the warrant. The suspect is now a fugitive. Suspect is located and arrested. The arrest data is entered into AICS/Complaint 725; Arrest Charge should be a B&E-related arrest charge (2201-2299).

2. When a warrant arrest is made by MSP on another agency's original complaint/warrant (including a different Post/ORI):

- MSP enters an Original ASSIST incident in to AICS, Closed 7 (TOT)
- Offense file class is submitted as the Original Offense.
- Arrest data would be entered into AICS; however, this data should also be given to the originating agency so they can update and clear their original complaint.
- This complaint will not be submitted to MICR because of the Assist status.

For example, Suspect 2 committed arson on February 15, 2013, out of a local PD jurisdiction. Local PD identifies suspect and a warrant is issued. MSP makes the arrest on March 11, 2013. MSP opens an assist complaint in AICS, with the original offense file class, adds the arrest data, and closes 7 (TOT).

3. When "Fail to Appear" or "Bench" type warrants are satisfied by MSP that originated outside of their ORI such as from a court:

- Because the "Fail to Appear" is a new complaint, subsequent to the original complaint, MSP would open an original complaint in AICS.
- Offense file class would be 50000, Obstructing Justice
- Arrest data entered into AICS.
- Arrest Charge code (accordingly) added to MICR.
- This complaint is cleared by arrest.
- Originating agency should be notified that the suspect has been arrested, so that they can update their original complaint, as well, with the arrest information.

For example, Suspect 3 committed a Larceny on March 1, 2013, out of a sheriff department jurisdiction, and was arrested on the spot. He/She was issued an "appearance notice" for March 30, 2013. The suspect did not appear for his/her court hearing on March 30th. Suspect was subsequently arrested on this outstanding warrant by MSP.

In Examples 2 and 3 above, if another offense file class (or crime) occurs during the warrant pickup, the arresting agency should open a second complaint in AICS for the new offense.
